MR CENTER RESIDENT POPULATION
PROFILE
June 30, 1976 and June 30, 1977

Profile of the Resident Population, June 30, 1976 and June 30, 1977
North Carolina Centers for the Mentally Retarded

INTRODUCTION

This report presents selected characteristics of the resident population at each of the four North Carolina Centers for the Mentally Retarded on June 30, 1976 and June 30, 1977. Number and percentage distributions are provided for age groups, race-sex groups, levels of retardation, length of stay categories and primary etiology (AAMD) categories. Means and median are provided for age and length of stay. Also included is a graph representing population trends in the Mental Retardation Centers for fiscal years 1954-1955 through 1976-1977.

SUMMARY

AGE - The mean age for the 3,240 residents at the MR Centers on June 30, 1977 was 27.4 years as compared to a mean of 26.6 years for the 3,504 residents on June 30, 1976. For June 30, 1977 the mean ages ranged from 20.7 for Western Carolina Center to 31.5 for Caswell Center.

RACE-SEX - On June 30, 1977, white males comprised 40.4 percent of the resident population as compared to 41.1 percent for June 30, 1976. Only 43.6 percent of the residents on June 30, 1977 were females although females account for an estimated 51.4 percent of the general North Carolina Population. ^{/1} Also for June 30, 1977, 28.1 percent of the MR Center residents were nonwhites, as compared to 23.2 percent in the general population. ^{/1}

LEVEL OF RETARDATION - On June 30, 1977, 57.5 percent of the MR Center residents were profoundly retarded according to impairment of intellectual functioning. [Levels of retardation based upon impairment of adaptive behavior are not available from these data.]

LENGTH OF STAY - The median length of stay for residents on June 30, 1977 was 11.9 years as compared to a median of 10.9 years for residents on June 30, 1976. For June 30, 1977, the medians ranged from 8.3 years for Western Carolina Center to 13.2 years for Caswell Center.

MR CENTER RESIDENT POPULATION
PROFILE
JUNE 30, 1978

PROFILE OF THE RESIDENT POPULATION, JUNE 30, 1978
NORTH CAROLINA CENTERS FOR THE MENTALLY RETARDED

INTRODUCTION

This report presents selected characteristics of the resident population at each of the four North Carolina Centers for the Mentally Retarded on June 30, 1978. Number and percentage distributions are provided for age groups, race-sex groups, levels of retardation, length of stay categories, and primary etiology (AAMD) categories. Means and medians are provided for age and length of stay. Also included is a graph representing population trends in the Mental Retardation Centers for fiscal years 1955-1956 through 1977-1978.

SUMMARY

AGE - The mean age for the 3,077 residents at the MR Centers on June 30, 1978 was 28.3 years as compared to a mean of 27.4 years for the 3,240 residents on June 30, 1977. For June 30, 1978 the mean ages ranged from 21.5 for Western Carolina Center to 32.6 for Caswell Center.

RACE-SEX - On June 30, 1978, white males comprised 40.6 percent of the resident population as compared to 40.4 percent for June 30, 1977. Only 43.0 percent of the residents on June 30, 1978 were females although females account for an estimated 51.5 percent of the general North Carolina population.^{/1} Also for June 30, 1978, 28.6 percent of the MR Center residents were nonwhites, as compared to 23.4 percent in the general population.^{/1}

LEVEL OF RETARDATION - On June 30, 1978, 61.1 percent of MR Center residents were profoundly retarded according to impairment of intellectual functioning. [Levels of retardation based upon impairment of adaptive behavior are not available from these data.]

LENGTH OF STAY - The median length of stay for residents on June 30, 1978 was 12.9 years as compared to a median of 11.9 years for residents on June 30, 1977. For June 30, 1978 the medians ranged from 9.3 years for Western Carolina Center to 14.2 years for Caswell Center.

PROFILE OF THE RESIDENT POPULATION, JUNE 30, 1979
NORTH CAROLINA CENTERS FOR THE MENTALLY RETARDED

NORTH CAROLINA STATE LIBRARY
RALEIGH

INTRODUCTION

This report presents selected characteristics of the resident population at each of the four North Carolina Centers for the Mentally Retarded on June 30, 1979. Number and percentage distributions are provided for age groups, race-sex groups, length-of-stay categories, and levels of IQ and adaptive behavior impairments. Means and medians are provided for age and length-of-stay. Also included is a graph representing resident population trends in the Mental Retardation Centers for fiscal years 1956-1957 through 1978-1979.

SUMMARY

AGE - The mean age for the 3,063 residents at the MR Centers on June 30, 1979 was 29.1 years as compared to a mean of 28.3 years for the 3,077 residents on June 30, 1978. For June 30, 1979, the mean ages ranged from 22.3 for Western Carolina Center to 33.4 for Caswell Center.

RACE-SEX - On June 30, 1979, white males comprised 40.4 percent of the resident population as compared to 40.6 percent for June 30, 1978. Only 43.2 percent of the residents on June 30, 1979 were females although females account for an estimated 51.5 percent of the general North Carolina Population.^{/1} Also for June 30, 1979, 28.9 percent of the MR Center residents were nonwhites, as compared to 23.2 percent in the general population. ^{/1}

LEVEL OF RETARDATION - On June 30, 1979, 65.2 percent of MR Center residents were profoundly impaired in intellectual functioning and 62.1 percent were profoundly impaired in adaptive behavior.

LENGTH-OF-STAY - The median length of stay for residents on June 30, 1979 was 13.9 years as compared to a median of 12.9 years for residents on June 30, 1978. For June 30, 1979, the medians ranged from 10.2 years for Western Carolina Center to 15.1 years for Caswell Center.

Mental Health Statistics' Report ARR 15 is an annual report on the resident population of the State Mental Retardation Centers produced from the annual resident population and on-leave summary forms. (DS-74 MR).

This report presents selected characteristics of the resident population at each of the four North Carolina Centers for the Mentally Retarded on June 30, 1981. Frequency, percentage and cumulative^{/1} distributions are provided for age, race, and sex groups, age at admission, length of stay categories, level of IQ and adaptive behavior impairments, and the incidence of disabilities in addition to mental retardation. Resident population trends for the past fifteen fiscal years are presented in a graph under Table 1.

Some of the key points of the report are:

- There has been a 28 percent decrease in the resident population from June 30, 1967 to June 30, 1981.
- In FY1981 over 70 percent of the residents were under 35 years old.
- For the population in residence in FY1981 almost 50 percent were admitted between the age of 6 and 12 years old.
- Both the mean and median length of stay for the resident population on June 30, 1981 was 15.7 years.
- Over 60 percent of the resident population was profoundly impaired in both intellectual functioning and adaptive behavior.
- The mean number of disabilities in addition to mental retardation among the resident population was 2.1.

^{/1} Frequency and percentage distributions based on successive additions.

PROFILE SUMMARY

RESIDENT POPULATION TRENDS

On June 30, 1981 the resident population at the four State Mental Retardation Centers totalled 3,169 persons. This represents a 28 percent decline from the end of the fiscal year in 1967 when the resident population was 4,378 persons.

Over the past fifteen fiscal years the resident population at each of the state facilities for the mentally retarded has declined with the exception of Western Carolina Center (See Table 1). However, since 1971, when the resident populations of the mental retardation centers peaked, all facilities have shown a downward trend in number of residents.

AGE - RACE - SEX

Breakdowns on the demographic variables of age, race, and sex are shown in Table 2. Over 70 percent (2270) of the residents at the four State Mental Retardation Centers were under 35 years of age. The mean age for the 3,169 residents at the four North Carolina Centers for the Mentally Retarded was 30.4 years.

The resident population on June 30, 1981 was approximately 70 percent (2261) white and 30 percent (908) non-white. Males accounted for 57 percent (1805) of the resident population, while females accounted for 43 percent (1364) of the resident population.

AGE AT ADMISSION - LENGTH OF STAY

Data are presented in Table 3 on admission characteristics. Almost 50 percent (1640) of the 3,169 residents at the state's mental retardation centers were admitted between the age of 6 and 12 years old. The mean admission age for residents was 15.2 years while the median/¹ age of admission was 12 years.

The mean and the median length of stay for the resident population on June 30, 1981 was 15.7 years. The variable, length of stay, is based upon the number of days between a persons admission date and the date of the close of the fiscal year being reported upon. For presentation in this report length of stay is grouped into sub-categories of months and years.

¹ If the observations are ranked in order from smallest to largest, the median is defined as the middle observation.

IQ - ADAPTIVE BEHAVIOR LEVELS

Table 4 provides data on IQ and adaptive behavior (AB) levels. The greatest percentage (63 percent) of residents at the MR Centers were profoundly impaired in intellectual functioning and 63 percent were also profoundly impaired in adaptive behavior.

When IQ and AB levels were combined almost 70 percent (2215) of the residents functioned at either the profound/profound impairment level or the severe/severe impairment level.

ADDITIONAL DISABILITIES

Almost 90 percent (2833) of the residents of the mental retardation centers had disabilities in addition to mental retardation. Data presented in Table 5 details the incidence of additional disabilities among the resident population at the close of fiscal year 1981.

The most frequently occurring neurological disorder was epilepsy, followed by cerebral palsy. Almost 40 percent (1206) of the residents had epilepsy, while 18 percent (570) had cerebral palsy.

Approximately 30 percent (959) of the resident population had ambulatory problems. Among these residents, 36 percent were non-ambulatory mobile and 64 percent were non-ambulatory, non-mobile.

Almost 30 percent (891) of the resident population had some type of visual or hearing impairment. Over 70 percent (2291) of the residents at the mental retardation centers had a disorder of perception and expression, with "no speech" being the most prevalent disorder. When cross tabulations were performed on the variable, "visual or hearing impairment", and the variable, "disorders of perception and expression", it was found that 24 percent (769) of the mental retardation center residents had both a visual or hearing impairment and a disorder of perception and expression.

Over 15 percent (573) of the resident population had some type of psychiatric impairment. Character disorders (9 percent) and psychoses (3 percent) were the most frequently occurring disorders.

Among the resident population additional disabilities ranged from 0 to 6, with a mean of 2.1. The number of additional disabilities were calculated by totalling the incidence of epilepsy, cerebral palsy, autism, other neurological disorders, non-ambulation, sensory impairment, disorders of perception and expression and psychiatric impairment.

ANNUAL STATISTICAL REPORT (ARR 15)
NORTH CAROLINA CENTERS FOR THE MENTALLY RETARDED
PROFILE OF THE RESIDENT POPULATION, JUNE 30, 1982

PREPARED BY: *DEBORAH K. DICKERSON*
TYPED BY: *SHERILL H. BULLOCK*

Mental Health Statistics' Report ARR 15 is an annual report on the resident population of the State Mental Retardation Centers produced from the annual resident population and on-leave summary forms (DS-74 MR).

This report presents selected characteristics of the resident and on leave population at each of the four North Carolina Centers for the Mentally Retarded on June 30, 1982. Frequency, percentage and cumulative /1 distributions are provided for age, race, and sex groups, age at admission, length of stay categories, level of IQ and adaptive behavior impariments, and the incidence of disabilities in addition to mental retardation. Resident population trends for the past fifteen fiscal years are presented in a graph under Table 1.

Some of the key points of the report are:

- There has been a 38 percent decrease in the resident and on leave population from June 30, 1968 to June 30, 1982.
- In FY 1982 over 65 percent of the residents were under 35 years old.
- For the population in residence in FY 1982 almost 50 percent were admitted between the age of 6 and 12 years old.
- Both the mean and median length of stay for the resident population on June 30, 1982 was 16 years.
- Over 60 percent of th resident population was profoundly impaired in both intellectual functioning and adaptive behavior.
- The mean number of disabilities in addition to mental retardation among the resident population was 2.1.

/1 Frequency and percentage distributions based on successive additions.

IQ - ADAPTIVE BEHAVIOR LEVELS

Table 4 provides data and IQ and adaptive behavior (AB) levels. The greatest percentage (67 percent) of residents at the MR Centers were profoundly impaired in intellectual functioning and 66 percent were also profoundly impaired in adaptive behavior.

When IQ and AB levels were combined almost 75 percent (2328) of the residents functioned at either the profound/profound impairment level or the severe/severe impairment level.

ADDITIONAL DISABILITIES

Almost 90 percent (2796) of the residents of the mental retardation centers had disabilities in addition to mental retardation. Data presented in Table 5 details the incidence of additional disabilities among the resident population at the close of fiscal year 1982.

The most frequently occurring neurological disorder was epilepsy, followed by cerebral palsy. Almost 40 percent (1207) of the residents had epilepsy, while 18 percent (548) had cerebral palsy.

Approximately 30 percent (935) of the resident and on leave population had ambulatory problems. Among these residents, 32 percent were non-ambulatory mobile and 68 percent were non-ambulatory, non-mobile.

Almost 30 percent (878) of the resident and on leave population had some type of visual or hearing impairment. Over 75 percent (2378) of the residents at the mental retardation centers had a disorder of perception and expression, with "no speech" being the most prevalent disorder. When cross tabulations were performed on the variable, "visual or hearing impairment", and the variable, "disorders of perception and expression", it was found that 23 percent (730) of the mental retardation center residents had both a visual or hearing impairment and a disorder of perception and expression.

Over 10 percent (437) of the resident and on leave population had some type of psychiatric impairment. Character disorders (4 percent) and psychoses (3 percent) were the most frequently occurring disorders.

Among the resident population additional disabilities ranged from 0 to 6, with a mean of 2.1. The number of additional disabilities were calculated by totalling the incidence of epilepsy, cerebral palsy, autism, other neurological disorders, non-ambulation, sensory impairment, disorders of perception and expression and psychiatric impairment.

Table 4 shows the mean and SD and adaptive behavior (AB) levels. The greatest percentage (49 percent) of residents at the 57 families were functionally independent in self-care, dressing and grooming and also functionally independent in adaptive behavior.

When 15 and 25 levels were combined, about 75 percent (37.5%) of the residents functioned at or above the program's minimum (adaptive level) or the state's minimum (adaptive level).

ADDITIONAL DISABILITIES

Almost 50 percent (47.5%) of the residents of the mental retardation center had disabilities in addition to mental retardation. Data presented in Table 2 details the incidence of additional disabilities among the resident population at the close of fiscal year 1981.

The most frequently occurring neurological disorder was epilepsy, followed by cerebral palsy. Almost 50 percent (47.5%) of the residents had epilepsy, while 14 percent (13.5%) had cerebral palsy.

Approximately 10 percent (9.5%) of the residents had no leave population and no neurological disorder. Among these residents, 11 percent were non-ambulatory adults and 85 percent were non-ambulatory.

Almost 50 percent (47.5%) of the residents and on leave population had some form of visual or hearing impairment. Over 75 percent (73.5%) of the residents at the mental retardation center had a disorder in perception and expression, with "no speech" being the most prevalent disorder. When cross tabulations were performed on the variables "visual" or "hearing impairment" and the variable "disorder of perception and expression," it was found that 43 percent (43%) of the mental retardation center residents had both a visual or hearing impairment and a disorder in perception and expression.

Over 10 percent (9.5%) of the residents and on leave population had some type of psychiatric impairment. Character disorders (4 percent) and psychosis (5 percent) were the most frequently occurring disorders.

Among the resident population additional disabilities ranged from 0 to 6, with a mean of 2.1. The number of additional disabilities were calculated by totaling the incidence of epilepsy, cerebral palsy, autism, core neurological disorders, mental retardation, sensory impairment, disorder in perception and expression and psychiatric impairment.

Mental Health Statistics' Report ARR 15 is an annual report on the resident population of the State Mental Retardation Centers produced from the annual resident population and on-leave summary forms (DS-74MR).

This report presents selected characteristics of the resident and on-leave population at each of the five North Carolina Centers for the Mentally Retarded on June 30, 1983. Frequency, percentage and cumulative/1 distributions are provided for age, race, and sex groups, age at admission, length of stay categories, level of IQ and adaptive behavior impairments, and the incidence of disabilities in addition to mental retardation. Resident population trends for the past fifteen fiscal years are presented in a graph under Table 1.

Some of the key points of the report are:

- There has been a 38 percent decrease in the resident and on-leave population from June 30, 1969 to June 30, 1983.
- In FY1983 over 65 percent of the residents were under 35 years old.
- For the population in residence in FY1983 almost 50 percent were admitted between the age of 6 and 12 years old.
- Both the mean and median length of stay for the resident population on June 30, 1983 was 16 years old.
- Over 65 percent of the resident population was profoundly impaired in both intellectual functioning and adaptive behavior.
- The mean number of disabilities in addition to mental retardation among the resident population was 2.0.

/1 Frequency and percentage distributions based on successive additions.

Mental Health Statistics, Report 1982 is an annual report on the resident population of the State Mental Retardation Center, prepared from the annual resident evaluation and census forms.

This report presents selected characteristics of the resident and on-leave population at each of the five fiscal years ending June 30, 1982. The monthly frequency percentages and summary statistics are provided for age, race, sex, group, level of education, length of stay, category of disability, and behavior characteristics, and the incidence of disability in relation to mental retardation. Resident population trends for the past fifteen fiscal years are presented in a graph under Table 1.

Some of the key points of the report are:

- There has been a 35 percent decrease in the resident and on-leave population from June 30, 1969 to June 30, 1982.
- In FY1982 over 65 percent of the residents were under 35 years old.
- For the population in residence in FY1982 almost 50 percent were admitted between the age of 5 and 12 years old.
- Both the mean and median length of stay for the resident population on June 30, 1982 was 16 years old.
- Over 65 percent of the resident population was profoundly impaired in both intellectual functioning and adaptive behavior.
- The mean number of disabilities in addition to mental retardation among the resident population was 3.0.

PROFILE SUMMARY

RESIDENT POPULATION TRENDS

On June 30, 1983 the resident and on-leave population at the five State Mental Retardation Centers totalled 3,154 persons. This represents a 38 percent decline from the end of the fiscal year in 1969 when the resident and on-leave population was 5,113 persons.

Over the past fifteen fiscal years the resident population at each of the state facilities for the mentally retarded has declined with the exception of Western Carolina Center (See Table 1). However, since 1971, when the resident populations of the mental retardation centers peaked, all facilities have shown a downward trend in number of residents.

AGE - RACE - SEX

Breakdowns on the demographic variables of age, race, and sex are shown in Table 2. Over 65 percent (2,053) of the residents at the five State Mental Retardation Centers were under 35 years of age. The mean age for the 3,154 residents at the five North Carolina Centers for the Mentally Retarded was 32.1 years.

The resident and on-leave population on June 30, 1983 was approximately 71 percent (2,241) white and 29 percent (913) non-white. Males accounted for 57 percent (1,800) of the resident population, while females accounted for 43 percent (1,354) of the resident population.

AGE AT ADMISSION - LENGTH OF STAY

Data are presented in Table 3 on admission characteristics. Almost 50 percent (1,511) of the 3,154 residents at the State's Mental Retardation Centers were admitted between the age of 6 and 12 years old. The mean admission age for residents was 16.2 years while the median/¹ age of admission was 13 years old.

The mean and the median length of stay for the resident and on-leave population on June 30, 1983 was slightly over 16 years. The variable, length of stay, is based upon the number of days between a person's admission date and the date of the close of the fiscal year being reported upon. For presentation in this report length of stay is grouped into sub-categories of months and years.

¹ If the observations are ranked in order from smallest to largest, the median is defined as the middle observation.

RESIDENT POPULATION TRENDS

On June 30, 1983 the resident and on-leave population at the five State Mental Retardation Centers totaled 3,154 persons. This represents a 35 percent decline from the end of the fiscal year in 1969 when the resident and on-leave population was 4,813 persons.

Over the past fifteen fiscal years the resident population at each of the State facilities for the mentally retarded has declined with the exception of Western Carolina Center (see Table 1). However, since 1971, when the resident population of the mental retardation centers peaked, all facilities have shown a downward trend in number of residents.

AGE - RACE - SEX

Breakdowns on the demographic variables of age, race, and sex are shown in Table 2. Over 62 percent (2,023) of the residents at the five State Mental Retardation Centers were under 35 years of age. The mean age for the 3,154 residents at the five South Carolina Centers for the Mentally Retarded was 22.1 years.

The resident and on-leave population on June 30, 1983 was approximately 75 percent (2,361) white and 25 percent (793) non-white. Males accounted for 47 percent (1,180) of the resident population, while females accounted for 43 percent (1,184) of the resident population.

AGE AT ADMISSION - LENGTH OF STAY

Data are presented in Table 3 on admission characteristics. Almost 50 percent (1,511) of the 3,154 residents at the State's Mental Retardation Centers were admitted between the age of 6 and 12 years old. The mean admission age for residents was 16.2 years while the median age of admission was 13 years old.

The mean and the median length of stay for the resident and on-leave population on June 30, 1983 was slightly over 16 years. The variability of length of stay is based upon the number of days between a person's admission date and the date of the close of the fiscal year being reported upon. For presentation in this report length of stay is grouped into sub-categories of months and years.

As the observations are ranked in order from smallest to largest, the median is defined as the middle observation.

IQ - ADAPTIVE BEHAVIOR LEVELS

Table 4 provides data and IQ and adaptive behavior (AB) levels. The greatest percentage (66 percent) of residents at the MR Centers were profoundly impaired in intellectual functioning and 64 percent were also profoundly impaired in adaptive behavior.

When IQ and AB levels were combined almost 73 percent (2,309) of the residents functioned at either the profound/profound impairment level or the severe/severe impairment level.

ADDITIONAL DISABILITIES

Almost 90 percent (2,818) of the residents of the mental retardation centers had disabilities in addition to mental retardation. Data presented in Table 5 details the incidence of additional disabilities among the resident population at the close of fiscal year 1983.

The most frequently occurring neurological disorder was epilepsy, followed by cerebral palsy. Almost 40 percent (1,223) of the residents had epilepsy, while 17 percent (534) had cerebral palsy.

Approximately 30 percent (909) of the resident and on-leave population had ambulatory problems. Among these residents, 33 percent were non-ambulatory mobile and 67 percent were non-ambulatory, non-mobile.

Almost 30 percent (859) of the resident and on-leave population had some type of visual or hearing impairment. Seventy-four percent (2,347) of the residents at the mental retardation centers had a disorder of perception and expression, with "no speech" being the most prevalent disorder. When cross tabulations were performed on the variable, "visual or hearing impairment", and the variable, "disorders of perception and expression", it was found that 21 percent (677) of the mental retardation center residents had both a visual or hearing impairment and a disorder of perception and expression.

Over 16 percent (493) of the resident and on-leave population had some type of psychiatric impairment. Character disorders (3 percent) and psychoses (5 percent) were the most frequently occurring disorders.

Among the resident population additional disabilities ranged from 0 to 6, with a mean of 2.1. The number of additional disabilities were calculated by totalling the incidence of epilepsy, cerebral palsy, autism, other neurological disorders, non-ambulation, sensory impairment, disorders of perception and expression and psychiatric impairment.

Table 4 provides data and 10 and adaptive behavior (AB) levels. The greatest percentage (62 percent) of residents at the HC Center were grossly impaired in intellectual functioning and 64 percent were also grossly impaired in adaptive behavior.

When 10 and AB levels were compared almost 73 percent (1,303) of the residents functioned at either the profound/profound impairment level or the severely severe impairment level.

ADDITIONAL DISABILITIES

Almost 30 percent (2,818) of the residents of the mental retardation centers had disabilities in addition to mental retardation. Data presented in Table 5 details the incidence of additional disabilities among the resident population at the close of fiscal year 1982.

The most frequently occurring neurological disorder was epilepsy, followed by cerebral palsy. Almost 40 percent (1,123) of the residents had epilepsy, while 17 percent (734) had cerebral palsy.

Approximately 10 percent (957) of the resident and on-leave population had ambulatory problems. Among these residents, 13 percent were non-ambulatory while 67 percent were non-ambulatory, non-walking.

Almost 30 percent (879) of the resident and on-leave population had some type of visual or hearing impairment. Seventy-four percent (2,347) of the residents of the mental retardation centers had a disorder of perception and expression, with "the speech" being the most prevalent disorder. When cross tabulated with problems on the variables, "visual or hearing impairment," and the variables, "disorders of perception and expression," it was found that 31 percent (879) of the mental retardation center residents had both a visual or hearing impairment and a disorder of perception and expression.

Over 18 percent (1,931) of the resident and on-leave population had some type of psychiatric impairment. Character disorders (3 percent) and psychoses (2 percent) were the most frequently occurring disorders.

Among the resident population additional disabilities ranged from 1 to 6, with a mean of 2.1. The number of additional disabilities were calculated by dividing the incidence of epilepsy, cerebral palsy, autism, other neurological disorders, non-ambulatory, sensory impairment, disorders of perception and expression and psychiatric impairment.

This is a Mental Health Client Information annual report on the resident population of the State Mental Retardation Centers produced from the annual resident population and on-leaves.

This report presents selected characteristics of the resident and on-leave population at each of the five North Carolina Centers for the Mentally Retarded on June 30, 1984. Frequency, percentage and cumulative/1 distributions are provided for age, race, and sex groups, age at admission, length of stay categories, level of IQ and adaptive behavior impairments, and the incidence of disabilities in addition to mental retardation. Resident population trends for the past fifteen fiscal years are presented in a graph under Table 1.

Some of the key points of the report are:

- There has been a 41 percent decrease in the resident and on-leave population from June 30, 1970 to June 30, 1984.
- In FY1984 over 63 percent of the residents were under 35 years old.
- For the population in residence in FY1984 almost 52 percent were admitted between the age of 6 and 12 years old.
- Both the mean and median length of stay for the resident population on June 30, 1984 was 17 years.
- Over 61 percent of the resident population was profoundly impaired in both intellectual functioning and adaptive behavior.
- The mean number of disabilities in addition to mental retardation among the resident population was 2.0.

/1 Frequency and percentage distributions based on successive additions.

This is a Mental Health Client Information annual report on the resident population of the State Mental Retardation Center produced from the annual resident population and on-leaves.

This report presents selected characteristics of the resident and on-leaves population at each of the five North Carolina Centers for the Mentally Retarded on June 30, 1984. Frequency, percentage and cumulative distribution are provided for age, race, and sex groups, age at admission, length of stay, categories, level of ID and adaptive behavior impairment, and the incidence of disabilities in addition to mental retardation. Resident population trends for the past fifteen fiscal years are presented in a graph under Table I.

Some of the key points of the report are:

- There has been a 41 percent decrease in the resident and on-leaves population from June 30, 1970 to June 30, 1984.
- In FY1984 over 63 percent of the residents were under 35 years old.
- For the population in residence in FY1984 almost 55 percent were admitted between the age of 6 and 12 years old.
- Both the mean and median length of stay for the resident population on June 30, 1984 was 17 years.
- Over 67 percent of the resident population was profoundly impaired in both intellectual functioning and adaptive behavior.
- The mean number of disabilities in addition to mental retardation among the resident population was 2.0.

1. Frequency and percentage distributions based on successive admissions.

PROFILE SUMMARY

RESIDENT POPULATION TRENDS

On June 30, 1984 the resident and on-leave population at the five State Mental Retardation Centers totalled 3,062 persons. This represents a 41 percent decline from the end of the fiscal year in 1970 when the resident and on-leave population was 5,195 persons.

Over the past fifteen fiscal years the resident population at each of the state facilities for the mentally retarded has declined with the exception of Western Carolina Center (See Table 1). However, since 1971, when the resident populations of the mental retardation centers peaked, all facilities have shown a downward trend in number of residents.

AGE - RACE - SEX

Breakdowns on the demographic variables of age, race, and sex are shown in Table 2. Over 63 percent (1,931) of the residents at the five State Mental Retardation Centers were under 35 years of age. The mean age for the 3,062 residents at the five North Carolina Centers for the Mentally Retarded was 33 years.

The resident and on-leave population on June 30, 1984 was approximately 71 percent (2,167) white and 29 percent (895) non-white. Males accounted for 57 percent (1,745) of the resident population, while females accounted for 43 percent (1,317) of the resident population.

AGE AT ADMISSION - LENGTH OF STAY

Data are presented in Table 3 on admission characteristics. Almost 50 percent (1,457) of the 3,062 residents at the State's Mental Retardation Centers were admitted between the age of 6 and 12 years old. The mean admission age for residents was 16.2 years while the median /1 age of admissions was 13 years old.

The mean and the median length of stay for the resident and on-leave population on June 30, 1984 was slightly over 17 years. The variable, length of stay, is based upon the number of days between a person's admission date and the the date of the close of the fiscal year being reported upon. For presentation in this report length of stay is grouped into sub-categories of months and years.

/1 If the observations are ranked in order from smallest to largest, the median is defined as the middle observation.

RESIDENT POPULATION TRENDS

On June 30, 1984 the resident and on-leave population at the five State Mental Retardation Centers totaled 3,085 persons. This represents a 41 percent decline from the end of the fiscal year in 1979 when the resident and on-leave population was 5,192 persons.

Over the past fifteen fiscal years the resident population at each of the State facilities for the mentally retarded has declined with one exception of Western Carolina Center (see Table 1). However, since 1971, when the resident population of the mental retardation centers peaked, all facilities have shown a downward trend in number of residents.

AGE - RACE - SEX

Breakdown on the demographic variables of age, race, and sex are shown in Table 2. Over 61 percent (1,911) of the residents at the five State Mental Retardation Centers were under 25 years of age. The mean age for the 3,085 residents at the five North Carolina Centers for the Mentally Retarded was 23 years.

The resident and on-leave population on June 30, 1984 was approximately 71 percent (2,147) white and 29 percent (882) nonwhite. Males accounted for 57 percent (1,742) of the resident population, while females accounted for 43 percent (1,315) of the resident population.

AGE AT ADMISSION - LENGTH OF STAY

Data are presented in Table 3 on admission characteristics. Almost 50 percent (1,427) of the 3,085 residents at the State's Mental Retardation Centers were admitted between the ages of 6 and 12 years old. The mean admission age for residents was 12.7 years while the median age of admission was 13 years old.

The mean and the median length of stay for the resident and on-leave population on June 30, 1984 was slightly over 13 years. The variable, length of stay, is based upon the number of days between a person's admission date and the date of the fiscal year being reported upon. For presentation in this report length of stay is grouped into sub-categories of months and years.

1) If the observations are ranked in order from smallest to largest, the median is defined as the middle observation.

IQ - ADAPTIVE BEHAVIOR LEVELS

Table 4 provides data and IQ and adaptive behavior (AB) levels. The greatest percentage (68 percent) of residents at the MR Centers were profoundly impaired in intellectual functioning and 66 percent were also profoundly impaired in adaptive behavior.

When IQ and AB levels were combined almost 75 percent (2,257) of the residents functioned at either the profound/profound impairment level or the severe/severe impairment level.

ADDITIONAL DISABILITIES

Almost 90 percent (2,707) of the residents of the mental retardation centers had disabilities in addition to mental retardation. Data presented in Table 5 details the incidence of additional disabilities among the resident population at the close of fiscal year 1984.

The most frequently occurring neurological disorder was cerebral palsy, followed by epilepsy. Almost 19 percent (576) of the residents had epilepsy, while 36 percent (1,097) had cerebral palsy.

Approximately 30 percent (889) of the resident and on-leave population had ambulatory problems. Among these residents, 33 percent were non-ambulatory mobile and 67 percent were non-ambulatory, non-mobile.

Almost 27 percent (831) of the resident and on-leave population had some type of visual or hearing impairment. Seventy-five percent (2,293) of the residents at the mental retardation centers had a disorder of perception and expression, with "no speech" being the most prevalent disorder. When cross tabulations were performed on the variable, "visual or hearing impairment", and the variable, "disorders of perception and expression", it was found that 23 percent (695) of the mental retardation center residents had both a visual or hearing impairment and a disorder of perception and expression.

Over 15 percent (463) of the resident and on-leave population had some type of psychiatric impairment. Character disorders (3 percent) and psychoses (5 percent) were the most frequently occurring disorders.

Among the resident population additional disabilities ranged from 0 to 6, with a mean of 2.0. The number of additional disabilities were calculated by totaling the incidence of epilepsy, cerebral palsy, autism, other neurological disorders, non-ambulation, sensory impairment, disorders of perception and expression and psychiatric impairment.

10 - ADAPTIVE BEHAVIOR LEVELS

Table 4 provides data and IQ and adaptive behavior (AB) levels. The greatest percentage (68 percent) of residents at the MR Center were profoundly impaired in intellectual functioning and 68 percent were also profoundly impaired in adaptive behavior. When IQ and AB levels were combined almost 75 percent (3,257) of the residents functioned at either the profound/profound impairment level or the severe/severe impairment level.

ADDITIONAL DISABILITIES

Almost 90 percent (3,707) of the residents of the mental retardation centers had disabilities in addition to mental retardation. Data presented in Table 5 details the incidence of additional disabilities among the resident population at the close of fiscal year 1984.

The most frequently occurring neurological disorder was cerebral palsy, followed by epilepsy. Almost 19 percent (838) of the residents had epilepsy, while 36 percent (1,597) had cerebral palsy.

Approximately 30 percent (1,289) of the resident and on-leave population had ambulatory problems. Among these residents, 33 percent were non-ambulatory, mobile and 67 percent were non-ambulatory, non-mobile.

Almost 57 percent (2,431) of the resident and on-leave population had some type of visual or hearing impairment. Seventy-five percent (3,233) of the residents at the mental retardation centers had a disorder of perception and expression, with "no speech" being the most prevalent disorder. When cross tabulations were performed on the variable, "visual or hearing impairment," and the variable, "disorders of perception and expression," it was found that 13 percent (552) of the mental retardation center residents had both a visual or hearing impairment and a disorder of perception and expression.

Over 15 percent (643) of the resident and on-leave population had some type of psychiatric impairment. Character disorders (3 percent) and psychoses (2 percent) were the most frequently occurring disorders.

Among the resident population additional disabilities ranged from 0 to 6, with a mean of 2.0. The number of additional disabilities were calculated by adding the incidence of epilepsy, cerebral palsy, autism, other neurological disorders, non-ambulation, sensory impairment, disorders of perception and expression and psychiatric impairment.

Mental Health

TITLE: Statistical M. Hart
Mental Health

This is a Mental Health Client Information annual report on the resident population of the State Mental Retardation Centers produced from the annual resident population and on-leaves.

This report presents selected characteristics of the resident and on-leave population at each of the five North Carolina Centers for the Mentally Retarded on June 30, 1985. Frequency, percentage and cumulative /1 distributions are provided for age, race, and sex groups, age at admission, length of stay categories, level of IQ and adaptive behavior impairments, and the incidence of disabilities in addition to mental retardation. Resident population trends for the past fifteen fiscal years are presented in a graph under Table I.

Some of the key points of the report are:

- There has been a 42 percent decrease in the resident and on-leave population from June 30, 1971 to June 30, 1985.
- In FY1985 over 63 percent of the residents were under 36 years old.
- For the population in residence in FY1985 almost 43 percent were admitted between the age of 6 and 12 years old.
- Both the mean and median length of stay for the resident population on June 30, 1985 was 17 years.
- Over 62 percent of the resident profoundly impaired in both intellectual functioning and adaptive behavior.
- The mean number of disabilities in addition to mental retardation among the resident population was 2.0.

/1 Frequency and percentage distributions based on successive additions.

This is a final report of the investigation conducted by the residents of the State of California between 1981 and 1982. The residents of the State of California are the only ones who can provide information on the residents of the State of California.

This report presents selected characteristics of the residents and the population of the State of California for the years 1981 and 1982. The data presented in this report are based on the 1981 Census of the State of California. The data are presented in a series of tables and charts. The data are presented in a series of tables and charts. The data are presented in a series of tables and charts.

Some of the key points of the report are:

- There has been a 15 percent increase in the resident and non-resident population from 1981 to 1982.

- In 1982, 15 percent of the residents were under 18 years old.

- For the population in residence in 1982, 15 percent were under 18 years old.

- For the non-resident population in 1982, 15 percent were under 18 years old.

- Over 15 percent of the resident population lived in non-metropolitan areas.

- The mean income of the residents in 1982 was \$10,000.

1. Frequency and percentage distribution of the residents of the State of California.

PROFILE SUMMARY

RESIDENT POPULATION TRENDS

On June 30, 1985 the resident and on-leave population at the five State Mental Retardation Centers totaled 3,011 persons. This represents a 42 percent decline from the end of the fiscal year in 1971 when the resident and on-leave population was 5,149 persons.

Over the past fifteen fiscal years the resident population at each of the state facilities for the mentally retarded has declined with the exception of Western Carolina Center (See Table 1). However, since 1971, when the resident populations of the mental retardation centers peaked, all facilities have shown a downward trend in number of residents.

AGE - RACE - SEX

Breakdowns on the demographic variables of age, race, and sex are shown in Table 2. Over 60 percent (1,805) of the residents at the five State Mental Retardation Centers were under 35 years of age. The mean age for the 3,011 residents at the five North Carolina Centers for the Mentally Retarded was 34 years.

The resident and on-leave population on June 30, 1985 was approximately 71 percent (2,125) white and 29 percent (886) non-white. Males accounted for 57 percent (1,720) of the resident population, while females accounted for 43 percent (1,291) of the resident population.

AGE AT ADMISSION - LENGTH OF STAY

Data are presented in Table 3 on admission characteristics. Almost 45 percent (1,351) of the 3,011 residents at the State's Mental Retardation Centers were admitted between the age of 6 and 12 years old. The mean admission age for residents was 16.3 years while the median ^{/1} age of admissions was 13 years old.

The mean and the median length of stay for the resident and on-leave population on June 30, 1985 was slightly over 18 years. The variable, length of stay, is based upon the number of days between a person's admission date and the date of the close of the fiscal year being reported upon. For presentation in this report length of stay is grouped into sub-categories of months and years.

^{/1} If the observations are ranked in order from smallest to largest, the median is defined as the middle observation.

IQ - ADAPTIVE BEHAVIOR LEVELS

Table 4 provides data and IQ and adaptive behavior (AB) levels. The greatest percentage (68 percent) of residents at the MR Centers were profoundly impaired in intellectual functioning and 67 percent were also profoundly impaired in adaptive behavior.

When IQ and AB levels were combined almost 74 percent (2,241) of the residents functioned at either the profound/profound impairment level or the severe/severe impairment level.

ADDITIONAL DISABILITIES

Almost 90 percent (2,660) of the residents of the mental retardation centers had disabilities in addition to mental retardation. Data presented in Table 5 details the incidence of additional disabilities among the resident population at the close of fiscal year 1985.

The most frequently occurring neurological disorder was cerebral palsy, followed by epilepsy. Almost 20 percent (590) of the residents had epilepsy, while 36 percent (1,079) had cerebral palsy.

Approximately 30 percent (884) of the resident and on-leave population had ambulatory problems. Among these residents, 33 percent were non-ambulatory mobile and 67 percent were non-ambulatory, non-mobile.

Almost 25 percent (760) of the resident and on-leave population had some type of visual or hearing impairment. Seventy-five percent (2,262) of the residents at the mental retardation centers had a disorder of perception and expression, with "no speech" being the most prevalent disorder. When cross tabulations were performed on the variable, "visual or hearing impairment", and the variable, "disorders of perception and expression", it was found that 23 percent (690) of the mental retardation center residents had both a visual or hearing impairment and a disorder of perception and expression.

Over 16 percent (473) of the resident and on-leave population had some type of psychiatric impairment. Character disorders (3 percent) and psychoses (5 percent) were the most frequently occurring disorders.

Among the resident population additional disabilities ranged from 0 to 6, with a mean of 2.0. The number of additional disabilities were calculated by totaling the incidence of epilepsy, cerebral palsy, autism, other neurological disorders, non-ambulation, sensory impairment, disorders of perception and expression and psychiatric impairment.

DATE: October, 1988

This is a Mental Health Client Information annual report on the resident population of the State Mental Retardation Centers produced from the annual resident population and on-leaves.

This report presents selected characteristics of the resident and on-leave population at each of the five North Carolina Centers for the Mentally Retarded on June 30, 1986. Frequency, percentage and cumulative /1 distributions are provided for age, race, and sex groups, age at admission, length of stay categories, level of IQ and adaptive behavior impairments, and the incidence of disabilities in addition to mental retardation. Resident population trends for the past fifteen fiscal years are presented in a graph under Table I.

Some of the key points of the report are:

- There has been a 39 percent decrease in the resident and on-leave population from June 30, 1972 to June 30, 1986.
- In FY1986 nearly 60 percent of the residents were under 35 years old.
- For the population in residence in FY1986 44 percent were admitted between the age of 6 and 12 years old.
- The mean length of stay for the resident population on June 30, 1986 was 18.6 years. The median was 19.2 years.
- Over 61 percent of the residents were profoundly impaired in both intellectual functioning and adaptive behavior.
- The mean number of disabilities in addition to mental retardation among the resident population was 2.1

/1 Frequency and percentage distributions based on successive additions.

PROFILE SUMMARY

RESIDENT POPULATION TRENDS

On June 30, 1986 the resident and on-leave population at the five State Mental Retardation Centers totaled 2,889 persons. This represents a 39 percent decline from the end of fiscal year 1972 when the resident and on-leave population was 4,709 persons.

Over the past fifteen fiscal years the resident population at each of the state facilities for the mentally retarded has declined. Although Western Carolina Center experienced periods of population growth during the late 1970's and early 1980's they, like all the MRC's, have had a general decline in numbers of residents since peaking in 1971.

AGE - RACE - SEX

Breakdowns on the demographic variables of age, race, and sex are shown in Table 2. Nearly 60 percent (1,638) of the residents at the five State Mental Retardation Centers were under 35 years of age. The mean age for the 2,889 residents at the five North Carolina Centers for the Mentally Retarded was 35 years.

The resident and on-leave population on June 30, 1986 was approximately 70 percent (2,036) white and 30 percent (853) non-white. Males accounted for 57 percent (1,651) of the resident population, while females accounted for 43 percent (1,238) of the resident population.

AGE AT ADMISSION - LENGTH OF STAY

Data are presented in Table 3 on admission characteristics. Over 46 percent (1,271) of the 2,889 residents at the State's Mental Retardation Centers were admitted between the age of 6 and 12 years old. The mean admission age for residents was 16.8 years while the median ^{/1} age of admissions was 13 years old.

The mean length of stay for the resident and on-leave population on June 30, 1986 was 18.6 years. The median length of stay was 19.2 years. The variable, length of stay, is based upon the number of days between a person's admission date and the date of the close of the fiscal year being reported upon. For presentation in this report length of stay is grouped into sub-categories of months and years.

^{/1} If the observations are ranked in order from smallest to largest, the median is defined as the middle observation.

PHYSICIAN SUMMARY

RESIDENT POPULATION TRENDS

In June 19, 1986 the resident and on-leave population of the five State Mental Retardation Centers totaled 1,823 persons. This represents a 38 percent decline from the end of fiscal year 1971 when the resident and on-leave population was 2,907 persons.

Over the past fifteen fiscal years the resident population at each of the State facilities for the mentally retarded has declined. Although Western Carolina Center reported periods of population growth during the late 1970's and early 1980's, like all the other facilities, it has had a general decline in numbers of residents since fiscal year 1971.

AGE - RACE - SEX

Birthdates on the descriptive statistics of age, race, and sex are shown in Table 1. Nearly 60 percent (1,140) of the residents at the five State Mental Retardation Centers were under 25 years of age. The mean age for the 5,041 residents at the five North Carolina Centers for the mentally retarded was 24 years.

The resident and on-leave population on June 30, 1986 was approximately 7 percent (1,280) white and 93 percent (1,543) non-white. Males accounted for 57 percent (1,051) of the resident population, while females accounted for 43 percent (792) of the resident population.

AGE AT ADMISSION - LENGTH OF STAY

Data are presented in Table 2 on admission characteristics. Over 60 percent (1,171) of the 1,823 residents at the State's Mental Retardation Centers were admitted between the ages of 5 and 15 years old. The mean admission age for residents was 10.8 years while the mean length of stay at admission was 13 years old.

The mean length of stay for the resident and on-leave population on June 30, 1986 was 13.6 years. The median length of stay was 12.1 years. The variable, length of stay, is based upon the number of days between a person's admission date and the date of the last of the fiscal year being reported upon. For presentation in this report length of stay is grouped into two categories of months and years.

If the observations are ranked in order from smallest to largest, the median is defined as the middle observation.

IQ - ADAPTIVE BEHAVIOR LEVELS

Table 4 provides data and IQ and adaptive behavior (AB) levels. The greatest percentage (69 percent) of residents at the MR Centers were profoundly impaired in intellectual functioning and 67 percent were profoundly impaired in adaptive behavior.

When IQ and AB levels were combined almost 76 percent (2,177) of the residents functioned at either the profound/profound impairment level or the severe/severe impairment level.

ADDITIONAL DISABILITIES

Almost 90 percent (2,592) of the residents of the mental retardation centers had disabilities in addition to mental retardation. Data presented in Table 5 details the incidence of additional disabilities among the resident population at the close of fiscal year 1986.

The most frequently occurring neurological disorder was cerebral palsy, followed by epilepsy. Almost 20 percent (584) of the residents had epilepsy, while 36 percent (1,035) had cerebral palsy.

Approximately 30 percent (838) of the resident and on-leave population had ambulatory problems. Among these residents, 34 percent were non-ambulatory mobile and 66 percent were non-ambulatory, non-mobile.

More than 25 percent (726) of the resident and on-leave population had some type of visual or hearing impairment. Seventy-five percent (2,187) of the residents at the mental retardation centers had a disorder of perception and expression, with "no speech" being the most prevalent disorder. When cross tabulations were performed on the variable, "visual or hearing impairment", and the variable, "disorders of perception and expression", it was found that 23 percent (659) of the mental retardation center residents had both a visual or hearing impairment and a disorder of perception and expression.

Nearly 17 percent (480) of the resident and on-leave population had some type of psychiatric impairment. Character disorders (3 percent) and psychoses (5 percent) were the most frequently occurring disorders.

Among the resident population additional disabilities ranged from 0 to 6, with a mean of 2.1. The number of additional disabilities were calculated by totaling the incidence of epilepsy, cerebral palsy, autism, other neurological disorders, non-ambulation, sensory impairment, disorders of perception and expression and psychiatric impairment.

10 - ADAPTIVE BEHAVIOR LEVEL

Table 1 presents data on the adaptive behavior level of the residents of the two centers. The greatest percentage (67 percent) of residents of the two centers were found to be in the range of 10 to 15 years of age. The greatest percentage (67 percent) of residents of the two centers were found to be in the range of 10 to 15 years of age.

When 10 and 15 years of age were combined, almost 75 percent (71.7) of the residents functioned at either the profound/profoundly retarded level or the severe/severely retarded level.

ADDITIONAL DISABILITIES

Almost 90 percent (89.6) of the residents of the mental institution had additional disabilities in addition to mental retardation. Data presented in Table 2 indicate the incidence of additional disabilities among the resident population at the time of fiscal year 1980.

The most frequently occurring neurological disorder was epilepsy, which was found in 33 percent (33.3) of the residents. Other neurological disorders were found in 10 percent (10.0) of the residents.

Approximately 10 percent (10.0) of the residents had orthopedic disabilities. Among these residents, 10 percent were non-amputated, 10 percent were amputated, and 10 percent were non-amputated, non-amputated.

More than 10 percent (10.0) of the residents had on-leash population. The most frequently occurring type of on-leash population was epilepsy, which was found in 10 percent (10.0) of the residents. Other types of on-leash population were found in 10 percent (10.0) of the residents. The most frequently occurring type of on-leash population was epilepsy, which was found in 10 percent (10.0) of the residents. Other types of on-leash population were found in 10 percent (10.0) of the residents.

More than 10 percent (10.0) of the residents had on-leash population. The most frequently occurring type of on-leash population was epilepsy, which was found in 10 percent (10.0) of the residents. Other types of on-leash population were found in 10 percent (10.0) of the residents.

More than 10 percent (10.0) of the residents had on-leash population. The most frequently occurring type of on-leash population was epilepsy, which was found in 10 percent (10.0) of the residents. Other types of on-leash population were found in 10 percent (10.0) of the residents.

This is a Mental Health Client Information annual report on the resident population of the State Mental Retardation Centers produced from the annual compilation of resident population and on-leaves.

This report presents selected characteristics of the resident and on-leave population at each of the five North Carolina Centers for the Mentally Retarded on June 30, 1987. Frequency, percentage, and cumulative distributions¹ are provided for age, race, and sex groups; age at admission; length of stay categories; level of IQ and adaptive behavior impairments; and incidence of disabilities in addition to mental retardation. Resident population trends for the past fifteen fiscal years are presented in a graph under Table I.

Some of the key points of the reports are:

- There has been a 37 percent decrease in the resident and on-leave population from June 30, 1973 to June 30, 1987.
- In fiscal year 1987 the median age of the residents was 34 years.
- For the population in residence in FY 1987 43 percent were admitted between the age of six and twelve years.
- The mean length of stay for the resident population on June 30, 1987 was 19.1 years. The median was 20 years.
- Over 62 percent of the residents were profoundly impaired in both intellectual functioning and adaptive behavior.
- The mean number of disabilities in addition to mental retardation among the resident population was 2.1.

¹Frequency and percentage distributions were based on successive additions.

PROFILE SUMMARY

RESIDENT POPULATION TRENDS

On June 30, 1987 the resident and on-leave population at the five State Mental Retardation totaled 2822 persons. This represents a 37 percent decline from the end of fiscal year 1973 when the resident and on-leave population was 4506 persons.

Over the past fifteen fiscal years the resident population at each of the state facilities for the mentally retarded has declined. Although Western Carolina Center experienced periods of population growth during the late 1970's and early 1980's they, like all the MRC's, have had a general decline in numbers of residents since peaking in 1971.

AGE - RACE - SEX

Breakdowns on the demographic variables of age, race, and sex are shown in Table 2. Over 80 percent (2263) of the residents of the five State Mental Retardation Centers were under 45 years of age. The mean age for the 2822 residents was 35.7 years.

The resident and on-leave population on June 30, 1987 was approximately seventy percent (1984) white and thirty percent (838) non-white. Males accounted for 57 percent (1618) of the population while females accounted for 43 percent (1204) of the resident population.

AGE AT ADMISSION - LENGTH OF STAY

Data are presented in Table 3 on admission characteristics. Exactly 43 percent (1214) of the 2822 residents at the State's Mental Retardation Centers were admitted between the ages of six and twelve years. The mean admission age for residents was 17.1 years while the median¹ age of admissions was 14 years, up from 13 last year.

The mean length of stay for the resident and on-leave population on June 30, 1987 was 19.1 years. The median length of stay was 20.0 years. The variable, length of stay, is based upon the number of days between a person's admission date and the date of the close of the fiscal year being reported upon. For presentation in this report length of stay is grouped into subcategories of months and years.

¹If the observations are ranked in order from smallest to largest, the median is defined as the middle observation.

TABLE 1

POPULATION DATA

On June 30, 1967, the resident and on-leave population of the five states (total population 1967) was 1,000,000. This represents a 15 percent increase from the end of fiscal year 1966 when the resident and on-leave population was 869,000.

Over the past fifteen years the resident population has grown at the rate of 1.5 percent per year. The on-leave population has grown at the rate of 1.5 percent per year. The total population has grown at the rate of 1.5 percent per year. The on-leave population has grown at the rate of 1.5 percent per year. The total population has grown at the rate of 1.5 percent per year.

TABLE 2

Table 2 shows the distribution of the population of the five states by age group. The mean age for the five states is 27.5 years. The mean age for the five states is 27.5 years. The mean age for the five states is 27.5 years.

The resident and on-leave population on June 30, 1967 was approximately 1,000,000. This represents a 15 percent increase from the end of fiscal year 1966 when the resident and on-leave population was 869,000.

TABLE 3

Data are presented in Table 3 on a basis of characteristics. Data are presented in Table 3 on a basis of characteristics. Data are presented in Table 3 on a basis of characteristics. Data are presented in Table 3 on a basis of characteristics.

The mean length of stay for the resident and on-leave population on June 30, 1967 was 10.1 years. The mean length of stay was 10.1 years. The mean length of stay was 10.1 years. The mean length of stay was 10.1 years.

If the observation was ended in order first mailed to request, the value is defined as the initial observation.

IQ - ADAPTIVE BEHAVIOR LEVELS

Table 4 provides data and IQ and adaptive behavior (AB) levels. The greatest percentage (69 percent) of residents at the MR Centers were profoundly impaired in intellectual functioning and 67 percent were profoundly impaired in adaptive behavior.

When IQ and AB levels were combined almost 77 percent (2,146) of the residents functioned at either the profound/profound impairment level or the severe/severe impairment level.

ADDITIONAL DISABILITIES

Almost 90 percent (2,534) of the residents of the mental retardation centers had disabilities in addition to mental retardation. Data presented in Table 5 details the incidence of additional disabilities among the resident population at the close of fiscal year 1987.

The most frequently occurring neurological disorder was cerebral palsy, followed by epilepsy. Over 20 percent (574) of the residents had epilepsy, while nearly 36 percent (1,004) had cerebral palsy.

Approximately 29 percent (807) of the resident and on-leave population had ambulatory problems. Among these residents, 33 percent were non-ambulatory mobile and 67 percent were non-ambulatory, non-mobile.

More than 25 percent (710) of the resident and on-leave population had some type of visual or hearing impairment. More than 75 percent (2,136) of the residents at the mental retardation centers had a disorder of perception and expression, with "no speech" being the most prevalent disorder. When cross tabulations were performed on the variable, "visual or hearing impairment", and the variable, "disorder of perception and expression", it was found that nearly 24 percent (661) of the mental retardation center residents had both a visual or hearing impairment and a disorder of perception and expression.

Over 17 percent (494) of the resident and on-leave population had some type of psychiatric impairment. Character disorders (3 percent) and psychoses (5 percent) were the most frequently occurring disorders.

Among the resident population additional disabilities ranged from 0 to 6, with a mean of 2.1. The number of additional disabilities was calculated by totaling the incidence of epilepsy, cerebral palsy, autism, other neurological disorders, non-ambulation, sensory impairment, disorders of perception and expression and psychiatric impairment.

Table 4 provides data and 16 and adaptive behavior (AB) levels. The greatest percentage (65 percent) of residents at the 16 level were cognitively impaired in intellectual functioning and 87 percent were profoundly impaired in adaptive behavior.

When 16 and 18 levels were combined almost 77 percent (2,148) of the residents functioned at either the profound/global significant level or the severe/global significant level.

ADAPTIVE BEHAVIOR LEVEL

About 60 percent (2,844) of the residents of the mental retardation center had disabilities in addition to mental retardation. Data presented in Table 5 details the incidence of additional disabilities among the resident population at the time of fiscal year 1987.

The most frequently occurring neurological disorder was cerebral palsy, followed by epilepsy. Over 40 percent (2,148) of the residents had epilepsy. About 10 percent (1,004) had cerebral palsy.

Approximately 23 percent (807) of the resident and on-leave population had ambulatory problems. About 10 percent (33 percent) were non-ambulatory. About 10 percent (33 percent) were non-ambulatory, non-mobile.

More than 20 percent (710) of the resident and on-leave population had some type of visual or hearing impairment. More than 70 percent (2,148) of the residents at the mental retardation center had a disorder of perception and expression, with "no speech" being the most prevalent disorder. When cases of perception and expression were performed on the variable, "visual or hearing impairment," and the variable, "disorder of perception and expression," it was found that nearly 24 percent (807) of the mental retardation center residents had both a visual or hearing impairment and a disorder of perception and expression.

Over 17 percent (644) of the resident and on-leave population had some type of psychiatric impairment. (The variable disorder is percent) and expression is percent) were the most frequently occurring disorders.

About the resident population additional disabilities ranged from 0 to 6, with a mean of 2.1. The number of additional disabilities was calculated by totaling the incidence of epilepsy, cerebral palsy, autism, other neurological disorders, non-ambulatory, sensory impairment, disorders of perception and expression and psychiatric impairment.

DATE: August 21, 1958

This is a Mental Health Client Information annual report on the resident population of the State Mental Retardation Centers produced from the annual compilation of resident population and on-leaves. Respite care clients are not included.

This report presents selected characteristics of the resident and on-leave population at each of the five North Carolina Centers for the Mentally Retarded on June 30, 1988. Frequency, percentage, and cumulative distributions¹ are provided for age, race, and sex groups; age at admission; length of stay categories; level of IQ and adaptive behavior impairments; and incidence of disabilities in addition to mental retardation. Resident population trends for the past fifteen fiscal years are presented in a graph under Table 1.

Some of the key points of the reports are:

- There has been a 36 percent decrease in the resident and on-leave population from June 30, 1974 to June 30, 1988.
- For the population in residence on June 30, 1988:
 - 42 percent were admitted between the age of six and twelve years.
 - the mean age of the residents was 36.5 years; the median was 35 years.
 - the mean length of stay was 19.6 years; the median was 20.6 years.
 - over 77% have been residents in excess of five years.
 - 63% of the residents were profoundly impaired in both intellectual functioning and adaptive behavior.
 - the mean number of disabilities in addition to mental retardation was 2.1; the median was 2.0.

¹Frequency and percentage distributions were based on successive additions.

This is a Mental Health Client Information annual report on the resident population of the State Mental Institution. Residents from the annual compilation of resident population and on-leaves. Residents who are not included.

This report presents selected characteristics of the resident and on-leaves population at each of the five North Carolina Centers for the Mentally Retarded as June 30, 1988. Frequency, percentage, and cumulative distribution are provided for age, race, sex, group, age at admission, length of stay categories, level of IQ and adaptive behavior (instrumental and functional) in addition to mental retardation. Resident population trends for the past fifteen fiscal years are presented in a graph under Table 1.

Some of the key points of the report are:

- There has been a 35 percent decrease in the resident and on-leaves population from June 30, 1973 to June 30, 1988.

- For the population in residence on June 30, 1988:

- 42 percent were admitted between the age of six and twelve years.
- The mean age of the residents was 30.5 years; the median was 30 years.
- The mean length of stay was 12.5 years; the median was 10.5 years.
- Over 75% have been residents in excess of five years.
- 83% of the residents were profoundly retarded in both intellectual functioning and adaptive behavior.
- The mean number of disabilities in addition to mental retardation was 2.1; the median was 2.0.

* Frequency and percentage distributions were based on successive admissions.

PROFILE SUMMARY

RESIDENT POPULATION TRENDS

On June 30, 1988 the resident and on-leave population at the five State Mental Retardation Centers totaled 2715 persons. This represents a 36 percent decline from the end of fiscal year 1974 when the resident and on-leave population was 4233 persons.

Over the past fifteen fiscal years the resident population at each of the state facilities for the mentally retarded has declined. Although Western Carolina Center experienced periods of population growth during the late 1970's and early 1980's they, like all the MRC's, have had a general decline in numbers of residents since peaking in 1971.

AGE - RACE - SEX

Breakdowns on the demographic variables of age, race, and sex are shown in Table 2. Over three quarters (2127) of the residents of the five State Mental Retardation Centers were under 45 years of age. The mean age of the residents was 35.7 years.

The resident and on-leave population on June 30, 1988 was approximately seventy percent (1911) white and thirty percent (804) non-white. Males accounted for 57 percent (1550) of the population while females accounted for 43 percent (1165) of the resident population.

AGE AT ADMISSION - LENGTH OF STAY

Data are presented in Table 3 on admission characteristics. About 42 percent (1133) of the 2715 residents at the State's Mental Retardation Centers were admitted between the ages of six and twelve years. The mean admission age for residents was 17.5 years while the median¹ age at admission was 14 years.

The mean length of stay for the resident and on-leave population on June 30, 1988 was 19.6 years. The median length of stay was 20.7 years. The variable, length of stay, is based upon the number of days between a person's admission date and the date of the close of the fiscal year being reported upon. For presentation in this report length of stay is grouped into subcategories of months and years.

¹If the observations are ranked in order from smallest to largest, the median is defined as the middle observation.

IQ - ADAPTIVE BEHAVIOR LEVELS

Table 4 provides data and IQ and adaptive behavior (AB) levels. The greatest percentage (69 percent) of residents at the MR Centers are profoundly impaired in intellectual functioning and 67 percent are profoundly impaired in adaptive behavior.

When IQ and AB levels are combined over 86 percent (2,297) of the residents are found severely or profoundly impaired in both intellectual functioning and adaptive behavior.

ADDITIONAL DISABILITIES

Almost 90 percent (2,424) of the residents of the mental retardation centers had disabilities in addition to mental retardation. Data presented in Table 5 details the incidence of additional disabilities among the resident population at the close of fiscal year 1988.

The most frequently occurring neurological disorder was cerebral palsy, followed by epilepsy. Nearly 36 percent (967) of the residents had cerebral palsy, while nearly 21 percent (568) had epilepsy.

Approximately 29 percent (779) of the resident and on-leave population had ambulatory problems. Among these residents, 33 percent were non-ambulatory mobile and 67 percent were non-ambulatory, non-mobile.

More than 25 percent (682) of the resident and on-leave population had some type of visual or hearing impairment. More than 75 percent (2,038) of the residents at the mental retardation centers had a disorder of perception and expression, with "no speech" being the most prevalent disorder. When cross tabulations were performed on the variable, "visual or hearing impairment", and the variable, "disorder of perception and expression", it was found that nearly 23 percent (622) of the mental retardation center residents had both a visual or hearing impairment and a disorder of perception and expression.

Nearly 18 percent (486) of the resident and on-leave population had some type of psychiatric impairment. Character disorders (3 percent) and psychoses (5 percent) were the most frequently occurring disorders.

Among the resident population the number of disabilities in addition to MR ranged from 0 to 6, with a mean of 2.1. Additional disabilities considered are epilepsy, cerebral palsy, autism, other neurological disorders, non-ambulation, sensory impairment, disorders of perception and expression and psychiatric impairment.

12 - ADAPTIVE BEHAVIOR LEVELS

Table 4 provides data and 10 and adaptive behavior (AB) levels. The greatest percentage (33 percent) of residents at the 55 Center are profoundly impaired in intellectual functioning and 67 percent are profoundly impaired in adaptive behavior.

When 15 and 45 levels are combined over 55 percent (12,437) of the residents are found severely or profoundly impaired in both intellectual functioning and adaptive behavior.

ADDITIONAL DISABILITIES

Almost 50 percent (12,434) of the residents of the mental retardation center had disabilities in addition to mental retardation. Data presented in Table 5 details the incidence of additional disabilities among the resident population at the close of fiscal year 1985.

The most frequently occurring neurological disorder was cerebral palsy, followed by epilepsy. Nearly 33 percent (1957) of the residents had cerebral palsy, while nearly 21 percent (1323) had epilepsy.

Approximately 22 percent (1779) of the resident and on-line population had ambulatory problems. About three residents, 33 percent were non-ambulatory, while 67 percent were non-ambulatory, non-verbal.

More than 25 percent (1623) of the resident and on-line population had some type of visual or hearing impairment. More than 10 percent (1,932) of the residents at the mental retardation center had a disorder of perception and communication, with "no speech" being the most prevalent disorder. When communication was performed on the verbal, "visual or hearing impairment," and the verbal, "disorder of perception and communication," it was found that nearly 25 percent (1623) of the mental retardation center residents had both a visual or hearing impairment and a disorder of perception and communication.

Nearly 18 percent (1160) of the resident and on-line population had some type of psychiatric impairment. Chronic disorders (11 percent) and psychosis (5 percent) were the most frequently occurring disorders.

Among the resident population the number of disabilities in addition to MR ranged from 2 to 6, with a mean of 2.1. Additional disabilities considered are epilepsy, cerebral palsy, autism, other neurological disorders, non-ambulatory, sensory impairment, disorder of perception and expression and psychiatric impairment.

FACTIVE SUMMARY

This report is produced annually by the Client Information Systems Branch of the Division of Mental Health, Mental Retardation and Substance Abuse Services, North Carolina Department of Human Resources. Statistics presented pertain to clients in residence or on leave from the five North Carolina Mental Retardation Centers on June 30, 1989. Respite care clients are not included.

The report is presented in graph and tabular format in a manner to profile selected characteristics of the population of each center and the aggregate population of all five centers. The graphs present resident population trends for the previous fifteen years. The tables provide frequency distributions by race, sex and age groups plus mean and median statistics for age at admission, current age and length of stay. These statistics are arranged by diagnosis categories.

Some of the key points of the report are:

- Sixty percent of the clients are currently between the ages of 25 and 45.
- Over ninety percent of the residents are severely or profoundly retarded.
- Nearly 10 percent of the clients have a vision or hearing impairment.
- Ten percent of the clients have mental disorders in addition to mental retardation.

TABLE 1-a:

The first table in each set presents frequency distributions for each of the 18 diagnosis categories. Mean and median statistics for age at admission, current age and length of stay are also shown.

Explanation of statistics:

Frequency: The total number of reported diagnoses. The count is unduplicated by facility, case number and admission date.

This report is produced annually by the Client Information Systems Branch of the Division of Mental Health, Retardation and Substance Abuse Services, North Carolina Department of Human Resources. Statistics presented pertain to clients in residence or on leave from the five North Carolina Mental Retardation Centers as of June 30, 1988. Respite care clients are not included.

The report is presented in graph and tabular format in a manner to profile selected characteristics of the population of each center and the aggregate population of all five centers. The graphs present the resident population trends for the previous fifteen years. The tables provide frequency distributions by race, sex and age groups plus mean and median statistics for age at admission, current age and length of stay. These statistics are arranged by diagnostic categories.

Some of the key points of the report are:

- Sixty percent of the clients are currently between the ages of 15 and 45.

- Over ninety percent of the residents are severely or profoundly retarded.

- Nearly 10 percent of the clients have a vision or hearing impairment.

- Ten percent of the clients have mental disorders in addition to mental retardation.

PROFILE SUMMARY

GRAPHS:

The graphs on pages 4 through 9 show population trends over the past fifteen years. On June 30, 1989 the resident and on-leave population at the five Mental Retardation Centers totaled 2647 persons. This represents a 27 percent decline from the end of fiscal year 1975 when the resident and on-leave population was 3602 persons.

Over the past fifteen years the resident population at each of the mental retardation centers has declined. Although Western Carolina Center experienced periods of growth during the late 1970's and early 1980's they, like all the MRC's, have had a general decline in numbers of residents since peaking in 1971. The sharp drop in the population at Western Carolina Center between 1982 and 1983 reflects transfer of residents to Black Mountain Center.

TABLES:

Six sets of three tables contain statistics for each of the five Mental Retardation Centers and a statewide summary. The data in all tables is presented for each of 19 diagnostic categories. These 19 categories are collected into seven larger groups plus a mental retardation group. Except within the mental retardation group, clients are anticipated to have one or more diagnoses in other categories within each group. Consequently, in some group totals the frequency may exceed the total population and the percent may exceed 100%. Conversely, since each client should have only one mental retardation diagnosis, it may be assumed that the statistics within the mental retardation group may also be applied to the institution as a whole.

Where categories other than mental retardation contain mostly zeroes it should be presumed an absence of reporting rather than absence of clients having the diagnosis. Data in the state total tables will be similarly affected.

TABLE 1-n:

The first table in each set presents frequency distributions for each of the 19 diagnosis categories. Mean and median statistics for age at admission, current age and length of stay are also shown.

Explanation of statistics:

Frequency: The total number of reported diagnoses. The count is unduplicated by facility, case number and admission date.

PROFILE SUMMARY

GRAPHIC

The graphs on pages 4 through 9 show population trends over the past fifteen years. On June 30, 1983 the resident and on-leave population at the Five Mental Retardation Centers totaled 2547 persons. This represents a 27 percent decline from the end of fiscal year 1978 when the resident and on-leave population was 3502 persons.

Over the past fifteen years the resident population at each of the five mental retardation centers has declined. Although Western Carolina Center experienced periods of growth during the late 1970's and early 1980's they, like all the WRC's, have had a general decline in numbers of residents since peaking in 1971. The sharp drop in the population at Western Carolina Center between 1982 and 1983 reflects transfer of residents to Black Mountain Center.

TABLE 1

Six sets of three tables contain statistics for each of the five Mental Retardation Centers and a statewide summary. The data in all tables is presented for each of 19 diagnostic categories. These 19 categories are collected into seven larger groups plus a mental retardation group. Except within the mental retardation group, clients are anticipated to have one or more diagnoses in other categories within each group. Consequently, in some groups totals the frequency may exceed the total population and the percent may exceed 100%. Conversely, since each client should have only one mental retardation diagnosis, it may be assumed that the statistics within the mental retardation group may also be applied to the institution as a whole.

Where categories other than mental retardation contain mostly males it should be presumed an absence of reporting rather than absence of clients having the diagnosis. Data in the state total tables will be similarly affected.

TABLE 1-a:

The first table in each set presents frequency distributions for each of the 19 diagnostic categories. Mean and median statistics for age at admission, current age and length of stay are also shown.

Explanation of statistics:

Frequency: The total number of reported diagnoses. The count is unduplicated by facility, case number and admission date.

Percent: The frequency divided by end of year census
 multiplied by 100.

Age at Admission was calculated by subtracting the date of birth
from date of admission.

Current age was calculated by subtracting date of birth from
June 30, 1989.

Length of stay was calculated by subtracting admission date from
June 30, 1989.

TABLE 2-n:

These tables show frequencies and percentages by race and sex.
The non-white classification includes client race reported as
Black, American Indian, Hispanic, other and unknown.

TABLE 3-n:

These tables present the population in seven different age groups.
Age was calculated by subtracting client date of birth from June
30, 1989.

Percent: The frequency divided by end of year census
multiplied by 100.

Age at Admission was calculated by subtracting the date of birth
from date of admission.

Current age was calculated by subtracting date of birth from
June 30, 1989.

Length of stay was calculated by subtracting admission date from
June 30, 1989.

TABLE 2-4:

These tables show frequencies and percentages by race and sex.
The non-white classification includes clients race reported as
Black, American Indian, Hispanic, other and unknown.

TABLE 3-1:

These tables present the population in seven different age groups.
Age was calculated by subtracting client date of birth from June
30, 1989.
